Task description

A non-empty array A consisting of N integers is given. The product of triplet (P, Q, R) equates to $A[P] * A[Q] * A[R]$ ($0 \leq P < Q < R < N$).

For example, array A such that:

```
A[0] = -3
A[1] = 1
A[2] = 2
A[3] = -2
A[4] = 5
A[5] = 6
```

contains the following example triplets:

- $(0, 1, 2)$, product is $-3 * 1 * 2 = -6$
- $(1, 2, 4)$, product is $1 * 2 * 5 = 10$
- $(2, 4, 5)$, product is $2 * 5 * 6 = 60$

Your goal is to find the maximal product of any triplet.

Write a function:

```
function solution(A);
```

that, given a non-empty array A , returns the value of the maximal product of any triplet.

For example, given array A such that:

```
A[0] = -3
A[1] = 1
A[2] = 2
A[3] = -2
A[4] = 5
A[5] = 6
```

the function should return 60, as the product of triplet $(2, 4, 5)$ is maximal.

Write an efficient algorithm for the following assumptions:

- N is an integer within the range $[3..100,000]$;
- each element of array A is an integer within the range $[-1,000..1,000]$.

```
1 // you can write to stdout for debugging purposes, e.g.
2 // console.log('this is a debug message');
3
4 function solution(A) {
5   // write your code in JavaScript (Node.js 8.9.4)
6   let arrayLength = A.length;
7   if(arrayLength < 3)
8     return 0;
9   A.sort((a,b)=>(a-b));
10  return Math.max(A[arrayLength - 1] * A[0] * A[1],A[arrayLer
11  }
```

Analysis summary

The solution obtained perfect score.

Analysis

Detected time complexity: $O(N * \log(N))$
